# ARES NERIAH

## AVIONICS HARDWARE TECHNICIAN | SOFTWARE & HARDWARE INTEGRATION | AEROSPACE HARNESS & ELECTRONICS

253-283-0252 | juxxymars@gmail.com | linkedin.com/in/ares-n-50924b13b/

## PROFESSIONAL PROFILE

Detail-oriented aerospace engineering and technical support professional with hands-on experience in avionics hardware, aerospace harness systems, circuit-board assembly, soldering, electrical testing, and troubleshooting. Experienced in precision work under a microscope, JTAG programming, hipot testing, harness assembly and routing, and technical documentation. Brings a strong foundation in cybersecurity and IT operations, analytical problem-solving, careful workmanship, and a commitment to safety, quality, and continuous improvement.

## WORK EXPERIENCE

### BLUE ORIGIN — AVIONICS HARDWARE TECHNICIAN II | JUN 15, 2026 – OCT 24, 2026

- Performed FX Pro JTAG programming on avionics hardware and supported hardware programming and verification workflows.
- Conducted high-potential (hipot) electrical testing and supported test setup, execution, and troubleshooting.
- Developed a four-wire test script for hipot testing as a project to support repeatable test execution and improve testing workflow.
- Soldered circuit boards and electronic assemblies to applicable IPC workmanship requirements and build documentation.
- Performed precision soldering of very small components and microchips under a microscope, maintaining control of heat, placement, solder quantity, and joint quality.
- Worked with wire harnesses, connectors, inserts, and related hardware; supported assembly, routing, fitment, and installation activities.
- Handled adhesives, clip bonds, and a variety of production chemicals in accordance with applicable process instructions and safety requirements.
- Inspected workmanship, identified potential defects, and supported rework and troubleshooting while following ESD controls, quality procedures, and technical documentation.

### ECHOSTAR CORPORATION — DISH TECHNICIAN | JAN 2026 – JUN 2026

- Installed, aligned, and fine-tuned satellite dishes to achieve reliable signal strength and system performance.
- Installed, configured, and activated receivers, modems, routers, and other customer networking equipment.
- Used diagnostic tools and signal meters to identify signal loss, connectivity problems, network issues, and hardware faults.
- Routed and secured coaxial and Ethernet cabling while maintaining safe, neat installations.
- Provisioned customer accounts and equipment through centralized systems; documented, updated, and closed work orders using mobile field-service software.
- Educated customers on equipment operation, Wi-Fi, remotes, billing options, and basic troubleshooting.
- Followed company and OSHA safety procedures when working on roofs, climbing ladders, and handling electrical equipment; maintained service-vehicle inventory.

### UPS — SEASONAL DRIVER | NOV 2025 – DEC 2025

- Delivered packages during peak season while following delivery procedures, route requirements, and safety practices.

### WALMART — TEAM ASSOCIATE | MAY 2025 – NOV 2025

- Supported apparel operations, stocking, merchandise organization, and general store-floor tasks.

### PROJECT KUIPER — HARNESS SUPPORT ENGINEER | MAR 2024 – OCT 2025

- Supported the design, development, assembly, routing, testing, and maintenance of aerospace wiring harnesses for satellite and spacecraft systems.
- Contributed to harness schematic concepts and material/component selection; helped plan routing and installation within aerospace vehicles.
- Used CIRRIS equipment to perform high-potential voltage (hipot) testing and verify harness performance and reliability.
- Wrote hipot test scripts from scratch by studying harness designs and translating electrical requirements into test procedures.
- Troubleshot test failures and harness issues; documented wiring diagrams, installation instructions, test procedures, and results.
- Worked with engineering, technician, and stakeholder teams to support integration, compliance, maintenance, and repair activities.

### SPACEX — STARLINK PRODUCTION TECHNICIAN III | MAR 2022 – FEB 2024

- Assembled, tested, and inspected satellite internet hardware in a production environment.
- Built circuit boards, integrated electronic components, operated manufacturing equipment, and performed quality inspections.
- Troubleshot defects and followed engineering specifications, safety requirements, and production quality standards.

### U.S. NAVY — AVIONICS TECHNICIAN | NOV 2019 – MAR 2022

- Maintained, troubleshot, repaired, and tested complex aviation electronic systems on tactical jets, fixed-wing aircraft, and rotary-wing helicopters.
- Supported avionics system readiness through fault isolation, repair, functional checks, and adherence to technical procedures.

## TECHNICAL SKILLS

- Precision hand soldering and micro-soldering under a microscope
- Through-hole and surface-mount component soldering; fine-pitch component work
- Solder joint inspection, workmanship evaluation, and rework support
- IPC workmanship and assembly documentation (experience applying applicable IPC requirements)
- Circuit-board assembly, component placement, and electronic hardware integration
- FX Pro JTAG hardware programming
- Hipot / high-potential voltage testing and electrical test troubleshooting
- Four-wire hipot test-script development; CIRRIS harness testing
- Wire harness assembly, routing, connectors, inserts, and cable termination
- Crimping; pin insertion and extraction; continuity and resistance testing
- Electrical schematic, wiring diagram, blueprint, and IPC documentation interpretation
- ESD handling, controlled-work practices, and quality inspection
- Adhesives, clip bonds, bonding processes, and production chemical handling
- Multimeters, oscilloscopes, harness boards, testing fixtures, and calibrated tools
- Failure analysis, fault isolation, root-cause troubleshooting, and technical documentation
- JIRA, Confluence, WARP, network administration, digital telephony, and Python
- Software installation; Wireshark, Nessus, Nmap, Autopsy, and FTK Imager
- Cleanroom and controlled-environment procedures; safety and process compliance

## TOOLS & EQUIPMENT

FX Pro JTAG tools; CIRRIS harness tester; multimeters; oscilloscopes; soldering irons and precision soldering tools; microscope; crimp tools; pin insertion/extraction tools; harness boards and test fixtures; ESD-safe equipment; Wireshark; Nessus; Nmap; Autopsy; FTK Imager.

## EDUCATION & CERTIFICATIONS

### CENTRAL WASHINGTON UNIVERSITY | 2024 – 2026

BAS, Information Technology & Administrative Management
Specialization: Cybersecurity
4.0 GPA; Dean’s List; President’s List; Medallion Award; Phi Kappa Phi Honor Society Member

### BATES TECHNICAL COLLEGE | 2020 – 2023

AAS, Cybersecurity
3.99 GPA; Summa Cum Laude; Outstanding Student

### NAVAL AIR TECHNICAL TRAINING CENTER — PENSACOLA | 2020

Avionics Technician Certification (expired)

### NAVAL AIR TECHNICAL TRAINING CENTER — JACKSONVILLE | 2020

Avionics Technician Certification (expired)
